

BREAST CANCER AND EXERCISE STUDY

An impact report for

The Jack Brockhoff Foundation

By The Baker Institute

Studies show

Patients with early stage breast cancer are more likely to die from heart disease

30 Participants

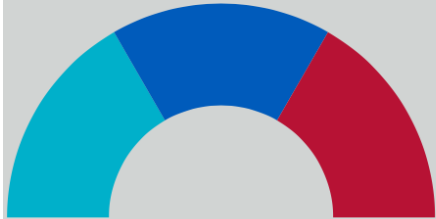

The impact of this one \$40,000 grant from the Jack Brockhoff Foundation has been extraordinary, well beyond anything that we could have expected

-Dr Andre La Gerche

A research collaboration with the Royal Children's Hospital has led to a study on childhood leukaemia and how exercise can help to protect young hearts against the ravages of cancer treatments, ensuring a long and healthy life after childhood cancer

Outcomes

NHMRC Grants

3 major NHMRC grants have been submitted at the Baker using pilot data generated from this project

Honours Students

2 Students have successfully completed their Honours degrees and advanced to PhD's

Presentations

Findings have been presented at 2 American and 1 European conference
